# What Are Responsive Ads?

---

Unlike traditional, static ads with fixed dimensions, Responsive Ads adjust and transform their size and content to fit a range of formats using a single HTML5 file. This technology enables the ad to adapt its content for varying devices and screen sizes, ensuring that the ad is always displayed in an optimized way, regardless of screen size.

---

## Building Responsive Ads

Predefined key formats are created to help the program automatically adapt and fill in the content for the in-between sizes. Separate files for each element within the ad are needed to make these fluid adaptations possible. It allows the creative elements to be moved independently and correspond to the different dimensions.

Ad elements include logos, backgrounds, images, text, buttons, videos, etc. Separate files are essential for Responsive Ads to maintain a high resolution.

High-resolution PNG, JPG, MP4, YouTube or Vimeo links are required for Responsive Ads. Working files for graphics can also be supplied. Working files include PDF, PSD, AI, EPS or SVG file types.

# News Portal Ad Sizes

---

## MID CONTENT

1940 x 535 | 1920 x 1080 | 1200 x 1200

Positioned within the main content.

## STICKY BOX

1200 x 1200 | 1940 x 535 | 1920 x 1080
